PROFESSIONAL SUMMARY

Full-Stack Software Engineer and Mobile Architect with 3+ years of experience engineering production web, mobile, and agentic AI systems. Architected multi-role platforms deployed to the App Store and Google Play, built generative prompt-to-game engines with Claude Code and Codex CLI, and created legal RAG pipelines over 36,000+ indexed statutes. Finalist in the national President Tech Award and BSc candidate in Business Information Systems at Westminster International University in Tashkent.

LANGUAGES & TECHNOLOGIES

Frontend & Web: React 18, Next.js 14, TypeScript, JavaScript, TailwindCSS, Radix UI, GSAP, Zustand, Redux Toolkit

Mobile & Games: Flutter 3.x, Flutter Flame, Dart 3.x, BLoC, Clean Architecture, GoRouter, Injectable, Dio, Google Maps SDK

Backend & APIs: Python, FastAPI, Node.js, Express, Prisma ORM, Django, REST APIs, WebSockets (Socket.io), Server-Sent Events (SSE)

AI Agents & Vector DBs: Claude Code, Codex CLI, Gemini CLI, OpenAI API, Gemini API, LangChain, ChromaDB, RAG Pipelines

Databases & Storage: PostgreSQL, Redis (ioredis, rate-limiting), Firebase (Auth, Firestore, FCM), SQLite, Hive, MinIO (S3)

Security & DevOps: E-IMZO PKI (National Digital Signature), Docker, Nginx, GitHub Actions (CI/CD), Vitest, Playwright, Asterisk SIP

PROFESSIONAL EXPERIENCE

Full-Stack AI Tooling & Game Engineer | Baklajan

March 2026 – Present

- Engineered a generative web platform converting 1-sentence natural language prompts into fully playable Flutter Flame games with automated project scaffolding, gameplay logic, and asset wiring.
- Designed a model-agnostic agentic framework integrating Claude Code, Codex CLI, and Gemini CLI across 4 sub-agents to orchestrate automated code synthesis and review.
- Automated end-to-end mobile QA, reducing manual testing effort by 60% through headless emulator test execution, automated defect diagnosis, and PR summaries.
- Shipped 15+ interactive mini-games on Flutter Flame, achieving 60 FPS performance on resource-constrained mobile hardware.

Founding Flutter Developer | X-Team Pro

December 2025 – February 2026

- Delivered the Study Ninja AI learning platform from zero to production across 4 engineers, employing Clean Architecture, BLoC, and the Repository Pattern.
- Decreased AI response roundtrip time to under 400ms by integrating Server-Sent Events (SSE) streaming for real-time contextual tutoring.
- Increased student course retention by 28% through the creation of an automated psychotyping engine that customizes curriculum pacing to student cognitive styles.
- Built a two-sided tutor-student marketplace and a SMART goal tracking dashboard with interactive progress analytics across 15+ modular packages.
- Cut regression defects by 35% by establishing strict architectural boundaries with GoRouter, GetIt dependency injection, and Freezed immutable models.

Fullstack Mobile & Backend Engineer | Self-Employed (Freelance)

March 2024 – Present

- Architected and released 6 commercial products to the App Store and Google Play with a 99.8% crash-free rate across 10,000+ active user accounts.
- Built Safar One, a production multi-role mobility system supporting 4 distinct user roles (passengers, drivers, couriers, restaurants) on a unified Flutter codebase.
- Designed an Express.js and Socket.io dispatch backend delivering under 100ms driver tracking updates, selected as a finalist in the national President Tech Award.

- Created Lawyer AI, indexing 36,000+ legal statutes and case documents from Lex.uz into ChromaDB vector database to provide sub-second legal analysis and contract validation.
- Automated 500+ daily inbound voice inquiries for commercial clients by engineering Sado AI with Asterisk SIP PBX telephony and speech-to-text synthesis.
- Reduced offline data synchronization conflicts by 40% across client apps by implementing offline-first local data layers using Hive and SQLite with automated REST/WebSocket syncing.

Junior Flutter Developer | Realsoft

January 2024 – March 2024

- Implemented the national E-IMZO PKI electronic digital signature authentication module, enabling legally binding cryptographic authentication for 10,000+ government and enterprise users.
- Migrated legacy monolithic modules to Clean Architecture, reducing module coupling and increasing unit test coverage to over 75% for critical signing and authentication flows.
- Conducted regular code reviews and refactored critical UI controllers to BLoC/Cubit, decreasing state-related defect tickets by 30%.

FEATURED PROJECTS & PRODUCTION SYSTEMS

Safar One Mobility Platform

[App Store & Google Play](#)

- Production 4-role ride-hailing and food delivery ecosystem engineered with Flutter, Express.js, WebSockets, and Google Maps, supporting live order dispatching, driver tracking, and restaurant order flows.

Lawyer AI Legal Assistant

[Code](#)

- Agentic legal RAG pipeline built with Flutter, FastAPI, ChromaDB, and LangChain, querying 36,000+ indexed legal statutes from Lex.uz to evaluate contracts and generate legal documents in seconds.

Study Ninja Platform

[Code](#)

- Adaptive educational ecosystem featuring real-time SSE AI tutoring, student psychotype modeling, progress analytics dashboards, and clean architectural separation.

EDUCATION

BSc in Business Information Systems | Westminster International University in Tashkent

2021 – 2026

- British accredited academic curriculum taught 100% in English. Coursework in Distributed Systems, Cloud Computing, Software Engineering, and Enterprise Database Design.
