PROFESSIONAL SUMMARY

Senior Flutter Engineer and AI Systems Architect with 3+ years of commercial experience delivering scalable mobile applications, Flutter Flame interactive engines, and full-stack backend platforms. Proven track record deploying 4-role mobility systems to the App Store and Google Play, building agentic AI frameworks orchestrating Claude Code and Codex CLI, and indexing 36,000+ legal documents into vector databases. Finalist in the national President Tech Award and BSc candidate in Business Information Systems at Westminster International University in Tashkent.

LANGUAGES & TECHNOLOGIES

Mobile & Game Dev: Flutter 3.x, Flutter Flame, Dart 3.x, Android (Kotlin interop), iOS (Swift interop), Material 3, Platform Channels

State & Architecture: Clean Architecture, BLoC, Cubit, Provider, Riverpod, GoRouter, GetIt, Injectable, Freezed, Dartz

AI Agents & LLMs: Claude Code, Codex CLI, Gemini CLI, OpenAI API, Gemini API, LangChain, ChromaDB (Vector DB), RAG Pipelines, SSE Streaming

Networking & Real-Time: REST APIs, WebSockets, Socket.io, Dio (Interceptors, retry policies), Firebase Cloud Messaging (FCM), Asterisk SIP

Backend & Databases: Python, FastAPI, Node.js, Express, Prisma ORM, PostgreSQL, Redis, Firebase (Auth, Firestore), SQLite, Hive, MinIO (S3)

Security & DevOps: E-IMZO PKI (National Digital Signature), Docker, Nginx, GitHub Actions (CI/CD), Vitest, Unit Testing, Figma

PROFESSIONAL EXPERIENCE

Flutter Game Developer & AI Tooling Engineer | Baklajan March 2026 – Present

- Spearheaded daily interactive mini-game production on Flutter Flame, delivering 15+ game builds maintaining a consistent 60 frames per second on low-end mobile devices.
- Engineered a generative web platform that transforms 1-sentence prompts into fully playable Flutter Flame games with automated project scaffolding, game loop logic, and asset wiring.
- Architected a model-agnostic agentic orchestration framework integrating Claude Code, Codex CLI, and Gemini CLI across 4 specialized sub-agents with custom skills and history tracking.
- Reduced manual QA cycles by 60% by automating end-to-end mobile testing, enabling autonomous emulator test execution, defect diagnosis, and automated code review summaries.

Founding Flutter Developer | X-Team Pro December 2025 – February 2026

- Designed and delivered the Study Ninja AI adaptive educational platform from zero to production across 4 engineers using Clean Architecture, BLoC, and the Repository Pattern.
- Accelerated conversational AI tutor responses to under 400ms by engineering custom Server-Sent Events (SSE) streaming pipelines.
- Increased student 30-day course retention by 28% by implementing an automated psychotyping engine that dynamically customizes lesson sequences to individual student learning styles.
- Built a two-sided tutor-student marketplace module and a SMART goal tracking dashboard with interactive progress analytics across 15+ modular feature packages.
- Decreased feature regression defects by 35% by standardizing the codebase on GoRouter, GetIt dependency injection, Dio, and Freezed immutable models.

Fullstack Flutter Developer | Self-Employed (Freelance) March 2024 – Present

- Delivered 6 commercial mobile applications from initial requirements to App Store and Google Play releases, achieving a 99.8% crash-free session rate across 10,000+ active users.
- Built Safar One, a multi-role on-demand platform serving 4 user roles (passengers, drivers, couriers, restaurants) from a single Flutter codebase with real-time WebSocket trip matching.
- Engineered an Express.js and Socket.io dispatch backend achieving sub-100ms real-time driver location updates, earning selection as a finalist in the national President Tech Award.

- Architected Lawyer AI, indexing 36,000+ legal statutes and case documents from Lex.uz into ChromaDB vector database to power sub-second RAG legal consultations and contract generation.
- Automated 500+ daily inbound voice inquiries for commercial clients by developing Sado AI, integrating Asterisk SIP PBX telephony with local speech-to-text and catalog RAG retrieval.
- Reduced offline data synchronization conflicts by 40% across client apps by implementing offline-first local data layers using Hive and SQLite with automated REST/WebSocket syncing.

Junior Flutter Developer | Realsoft

January 2024 – March 2024

- Implemented the national E-IMZO PKI electronic digital signature authentication module, enabling legally binding cryptographic authentication for 10,000+ government and enterprise users.
- Migrated legacy monolithic modules to Clean Architecture, reducing module coupling and increasing unit test coverage to over 75% for critical signing and authentication flows.
- Conducted regular code reviews and refactored critical UI controllers to BLoC/Cubit, decreasing state-related defect tickets by 30%.

FEATURED PROJECTS & PRODUCTION SYSTEMS

Safar One Mobility Platform

[App Store & Google Play](#)

- Production 4-role transportation and food delivery ecosystem engineered with Flutter, Express.js, WebSockets, and Google Maps, supporting live order dispatching, driver tracking, and restaurant order flows.

Lawyer AI Legal Assistant

[Code](#)

- Agentic legal RAG pipeline built with Flutter, FastAPI, ChromaDB, and LangChain, querying 36,000+ indexed legal statutes from Lex.uz to evaluate contracts and generate legal documents in seconds.

Study Ninja Platform

[Code](#)

- Adaptive educational ecosystem featuring real-time SSE AI tutoring, student psychotype modeling, progress analytics dashboards, and clean architectural separation.

EDUCATION

BSc in Business Information Systems | Westminster International University in Tashkent

2021 – 2026

- British accredited academic curriculum taught 100% in English. Coursework in Distributed Systems, Cloud Computing, Software Engineering, and Enterprise Database Design.
